

BONSILAGE SPEED G (liquid)

Silage additive (homo- and heterofermentative) for short silo ripening period and high stability in grass-, clover-grass, alfalfa and forage rye silages.

Characteristics

- L. diolivorans (neu)
- L. buchneri
- L. plantarum
- Mind. $1,25 \cdot 10^{11}$ lactic acid bacteria/g BONSILAGE SPEED G

Effects

- L. diolivorans: The only EU-approved strain of this type with an innovative, hitherto unknown metabolism
- the combination of L. diolivorans, L. buchneri and L. plantarum ensures intensive fermentation during the first few weeks in green silages
- Prevention of reheating and improvement of aerobic stability after short silo ripening time (2 weeks)

Recommendation for use

- dosage: 2 g BONSILAGE SPEED G/t ensiled material
- 1 can is sufficient to treat 50 t
- range of application: grass, clover-grass, alfalfa and forage rye silage: 28-45 % DM

Minimum storage period

- 2 weeks

2: enhancement of aerobic stability
2+: supplementary test for early silo opening
